### **DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/27/2008 has been entered.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida et al (US 2003/0053412; newly cited art) in view of Sheu et al (US 5,764,858).

Regarding claims 1-5 of the instant application, Yoshida, as shown in figures 7, 11, 14 and 16, teaches an OFDM receiver having antenna selection (13, 14 and 15) based on low error rate. See also paragraphs [0060] – [0081]. Yoshida fails to teach using the neural network to model the frequency response of the channel. However, Sheu, as shown in figures 2a and 3a, teaches using neural network (20 of fig. 2a and 39 of figure 3a) to model the frequency response of the wireless channel. See also abstract; column 1, line 61 to column 2, line 27; and column 8, line 30 to column 10, line 30. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Yoshida et al by incorporating the neural network as taught by Sheu et al so that the channel characteristics can be correctly modeled (adaptively learned; Sheu: column 2, lines 8-27) and thus to provide a better frequency response estimation of the channel.

#### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.
